

Trancas Canyon Cross-Country Water Main and Regulating Station Replacement

This project consists of installing approximately 540 feet of new 12-inch-diameter steel water main in the Trancas Canyon area, between Morning View Drive and Paseo Canyon Road to replace an existing, cross-country water main in the same area. The project will also include the replacement of a 500-foot segment of 4-inch-diameter water main on Pacific Coast Highway with a 12-inch diameter steel water main, and relocation of a pressure regulating station to improve the water service in the area. Construction of this project is scheduled to start in September 2009 and completed by early 2010.
